Subject: [FYI] escalating two sub modules to top-level modules
Date: 2014/04/17 03:34:04
List: dev@tajo.apache.org

Hi folks,

We are preparing to publish Tajo jars to public maven repository.
https://issues.apache.org/jira/browse/TAJO-517

So, we need to move two modules.
https://issues.apache.org/jira/browse/TAJO-752

The move will be as follows:

    - tajo-core/tajo-pullserver -> /tajo-yarn-pullserver
    - tajo-core/tajo-core-backend -> /tajo-core

It will be just a move, but it may cause some conflict of your working
branches.

I hope that it will not make you guys confused.

Best regards,
Hyunsik

Hi Hyunsik.

+1

I agree with your opinion. And we need to separate
TAJO-533<https://issues.apache.org/jira/browse/TAJO-533>,
too.

Cheers
Jaehwa
